+12

Continuing on the code that you wrote during the session.

Task1: Modify your code to make the answer buttons smaller and move them to the side then move the prizes and prize box to the side to make room for hint buttons, then implement the following buttons:

    a. A button that adds 10 seconds to the timer that can be used only once per game.

    b. A button that removes 2 of the answers that can be used only once per game.

        #HINT choose a random index that isn't the correct answer's index and remove all other answers

    c. A button that skips the current question that can be used only once per game.

        #HINT change the current question and reset the timer.

Task2: Add more questions to the game.

    #HINT add more questions to the questions file in the same format it contains, which is:

        question,answer1,answer2,answer3,answer4,index_of_correct_answer_starting_from_0.
